Introducing **mc²** Energy Services We Help Minimize Your Risk From Energy Market Volatility

mc² Can Help Create The Right Electricity Formula For Your Business

Today's energy markets are volatile. Influenced by market dynamics and weather, electricity prices change hourly each day. **mc²** Energy Services has developed a winning formula that makes buying and managing electricity for your business easy and efficient. We help you manage the volatility of the electricity market with our unique **mc² Choice** product that lets businesses choose a buying strategy that meets their specific requirements and objectives. Whether you want more certainty or wish to take advantage of changing hourly prices – we have a custom made plan that is just right for you.

Our Mission

mc² helps mitigate risks for non-residential customers who purchase electric supply in Illinois. We pride ourselves on being customer focused and responsive with innovative products. We have an experienced and knowledgeable management and sales team ready to assist you in determining the appropriate product to meet your electricity needs. As your trusted ally in the energy business, **mc²** helps you navigate through the complex rules and regulations of Illinois' deregulated electricity market.

Our Company

Established in 2008 by veteran energy industry experts, **mc²** is an Alternative Retail Electricity Supplier (ARES) licensed by the Illinois Commerce Commission. **mc²** has a local experienced team that helps Illinois businesses manage their risk by providing them with competitive electric supply products and services. **mc²**, through its full service wholesale trading partner, Wolverine Trading, LLC, is uniquely positioned to offer customers innovative and reliable energy management and power purchasing strategies.

Our Clients

mc² provides electricity to a variety of commercial and industrial facilities across Northern Illinois in the Commonwealth Edison (ComEd) service territory. Our clients include:

- Commercial Real Estate including office buildings and condominium associations
- Manufacturing
- Warehouse and Storage Facilities
- Hospitality
- Retail
- Health Care
- Education
- Data Centers
- Worship Facilities

Our Products

mc² is uniquely positioned to offer you a broad range of choices to help you manage the inherent volatility in today's wholesale electricity markets. Whatever your risk tolerance is, **mc²** has a product that is just right for you.

mc² Locked

With **mc² Locked**, you lock in the rate you pay for electricity during the term of your service agreement. This plan is ideal for businesses who want protection against the volatility of changing wholesale electricity prices. No matter what happens with market prices you achieve peace of mind with price stability, and benefit from the ability to forecast your energy budget with greater accuracy.

mc² Index

Under the **mc² Index** product, your electricity usage is tied to the market-based price. The price you pay fluctuates with the wholesale market based on an independently published hourly index rate. By being tied to the market index, you have the opportunity to benefit when wholesale electricity prices are reduced. This option is appealing to businesses with a greater appetite for price risk.

mc² Choice

Customize how you purchase electricity supply with **mc² Choice**, our risk management product. We can help you manage your risk tolerance with a plan that combines the price certainty of our **mc² Locked** product while achieving the potential cost savings of the **mc² Index** option. This plan is ideal for businesses who want to be partially exposed to the market price volatility while hedging the remainder of your company's electricity load at a fixed rate.

As part of the **mc² Choice** product, **mc²** offers an energy price cap to benefit customers who wish to limit their exposure to upward market price fluctuations. With the **mc²** cap option, you have the opportunity to take advantage of lower market based rates during periods of reduced demand while maintaining protection should the Index based rate for electricity supply rise significantly.

**Take control of your electricity costs.

Energy Saving Options

Renewable Energy

mc² is committed to protecting the environment both now and in the future. Responsible companies are adding renewable energy sources to their energy supply formula to help decrease their impact on the environment. **mc²** can help you choose "green" and find the right renewable energy sources to meet your objectives.

Renewable Energy Certificates (RECs) can be purchased through **mc²**. These certificates help offset your company's carbon footprint and represent energy produced by renewable sources in use today, like wind power. **mc²** is compliant with the State of Illinois Renewable Portfolio Standards.

Energy Efficiency

For many businesses, energy is becoming one of the larger expenses incurred each month. Becoming more efficient in the way you use energy can help your bottom line and the environment. There are many Demand Side Management (DSM) options to consider including demand response, lighting, and rebate programs.

Demand Response (DR) involves actions that influence the quantity or patterns of electricity used by your business. By participating in a Demand Response program, your company agrees to reduce your electricity consumption during peak demand periods when energy-supply systems are constrained.

In cooperation with energy efficiency experts, we have the ability to evaluate any facility and determine if substantial energy savings that can be achieved related to lighting. With lighting representing up to 40 percent of the overall annual power cost for certain buildings, the savings that can be achieved can have a major impact on your bottom line.

Take advantage of programs offered by local utility companies and government agencies. These programs offer free or subsidized commercial energy audits to identify energy-efficiency opportunities. Some also offer energy-efficiency incentives and rebates. And they may have an affordable loan program to help fund larger projects.
