MC Squared Energy Services Achieves Green Energy Milestone

- Through the purchase and retirement of Renewable Energy Certificates (RECs)* on behalf of its Illinois customers, mc² surpassed the 1 billion-kWh mark of green energy generated
- Green RECs retired by mc² represent the equivalent of eliminating over 919,000 metric tons of carbon dioxide (CO₂) emissions from the atmosphere
- The retired RECs represent the electricity consumption of over 125,000 typical residential homes in a year

CHICAGO, March 20, 2019 (GLOBE NEWSWIRE) -- [MC Squared Energy Services, LLC](#) (mc²), a leading retail electricity supply company located in Chicago, recently exceeded the milestone of retiring 1,000,000 Renewable Energy Certificates (RECs)*, which represent the generation from renewable resources of over 1 billion kilowatt-hour (kWh) of green energy. mc² offers product options that allow its residential, commercial, industrial, educational and municipal customers to do their part in helping to reduce the world's carbon footprint. Over the past eight years, the company has collectively retired over 1.3 million RECs and surpassed the 1.3 billion-kWh threshold for voluntary green energy generation.

"The purchase and retirement of the green RECs help support the development of sustainable electricity generation resources, such as wind and solar," said Chuck Sutton, founder and president of mc². "This is a significant achievement, and we are proud to be a green energy supplier."

As part of the voluntary green energy REC retirement process, mc² assisted seven Chicago-area communities in becoming certified EPA Green Power Partnership Communities. These municipal aggregation communities served by mc² include Clarendon Hills, LaGrange Park, Oswego, Palos Park, South Barrington, South Elgin and Tinley Park.

"The Village of South Barrington, Illinois is pleased to become an EPA Green Power Partnership Community utilizing wind generated Renewable Energy Credits for the eligible Community Choice Aggregation customers served by MC Squared Energy," said South Barrington mayor Paula McCombie. "We support the development of sustainable energy resources, and the reduction of our carbon footprint. Becoming an EPA Green Power Partner is a proactive step that we can take to help these efforts."

mc² hopes to surpass the 2 billion-kWh threshold for voluntary green RECs by 2020 as the demand for green options for electricity supply continues to expand. In addition, mc² looks forward to rolling out exciting new ways for its customers to support — and benefit from — new renewable energy generation resources in Illinois.

*Each REC represents 1,000 kilowatt-hours (kWh) of energy generated from a clean, renewable source, such as wind, solar, hydro or certain types of renewable biomass. Over 95 percent of the RECs that mc² retired were sourced from wind generation resources within the Midwest. All RECs purchased and retired by mc² were tracked through an independent third party, the Midwest Renewable Energy Tracking System (M-RETS).
